

Pest Control Checklist

Going through all cabinets

Potential pests that you can find are cockroaches, rice bugs and moths. There is also the possibility of moth larvae to be found.

Ducts & vents

Those hard to reach places are often home of moths, cockroaches and rarely - ants.

Tile cracks and holes

Ants and cockroaches love to live and hide in such places. While they are too small for inspection, we suggest you seal them using grout sealers.

Floor Drains

The perfect escape for ants and cockroaches. We suggest you regularly clean them. It's also a good option if you use solid covers, only removing them when needed.
